

INNOVIVA™

Corporate Presentation

July 2024

Forward-looking statements

The information in this presentation contains forward looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended (the “Securities Act”). Such forward looking statements involve substantial risks, uncertainties and assumptions. All statements in this herein, other than statements of historical fact, including, without limitation, statements regarding our strategy, future operations, future financial position, future revenue, projected costs, prospects, plans, intentions, expectations, goals and objectives may be forward looking statements. The words “anticipates,” “believes,” “could,” “designed,” “estimates,” “expects,” “goal,” “intends,” “may,” “objective,” “plans,” “projects,” “pursuing,” “will,” “would” and similar expressions (including the negatives thereof) are intended to identify forward looking statements, although not all forward-looking statements contain these identifying words. We may not actually achieve the plans, intentions, expectations or objectives disclosed in our forward-looking statements and the assumptions underlying our forward-looking statements may prove incorrect. Therefore, you should not place undue reliance on our forward-looking statements. Actual results or events could differ materially from the plans, intentions, expectations and objectives disclosed in the forward-looking statements that we make. All written and verbal forward looking statements attributable to us or any person acting on our behalf are expressly qualified in their entirety by the cautionary statements contained or referred to in this section.

Important factors that we believe could cause actual results or events to differ materially from our forward looking statements include, but are not limited to, risks related to: lower than expected future royalty revenue from respiratory products partnered with GSK, the commercialization of RELVAR®/BREO® ELLIPTA®, ANORO® ELLIPTA®, GIAPREZA®, XERAVA®, and XACDURO® in the jurisdictions in which these products have been approved; the strategies, plans and objectives of the Company (including the Company's growth strategy and corporate development initiatives); the timing, manner, and amount of potential capital returns to shareholders; the status and timing of clinical studies, data analysis and communication of results; the potential benefits and mechanisms of action of product candidates; expectations for product candidates through development and commercialization; the timing of regulatory approval of product candidates; and projections of revenue, expenses and other financial items; the impact of the novel coronavirus (“COVID-19”); the timing, manner and amount of capital deployment, including potential capital returns to stockholders.

Any person reviewing this presentation is advised to review our “Risk Factors” and other information in our Annual Report on Form 10-K for the year ended December 31, 2023 filed with the Securities and Exchange Commission (“SEC”) on February 29, 2024, (“2023 Form 10-K”), and the information in the other reports and documents that we file with the SEC from time to time. All information in this presentation should be read in conjunction with the information we have filed with the SEC. All forward-looking statements in this presentation are based on current expectations as of the date hereof and we do not assume any obligation to update any forward-looking statements on account of new information, future events or otherwise.

Innoviva at a glance

Strongly cashflow-positive, durable core royalty business stemming from widely used respiratory products

Commercial stage, growth-oriented critical care and infectious disease platform supported by late-stage pipeline

Diversified, valuable portfolio of healthcare assets

Thoughtful, robust approach to long-term capital deployment

Strong track record and value creation focus

Innoviva has a valuable portfolio of royalties, a robust operating therapeutics platform, and other healthcare assets

 Royalty assets	 Innoviva Specialty Therapeutics assets	 Strategic healthcare assets

	LTM royalty revenue							
 RELVAR® / BREO® ELLIPTA®	\$209M							
 ANORO® ELLIPTA®	\$47M							

Over \$345M royalty and net product revenue generated in last twelve months (LTM)

1. As of 6/30/2024, ISP Fund valued at \$270M, Armata ownership valued at \$204M, and other assets valued at \$62M per the Company Form 10-Q for Q2 2024. Note: LTM in this presentation refers to the last twelve months ending June 30, 2024.

Royalty Assets

Our royalty assets, composed of widely used respiratory therapies commercialized by GSK, have produced durable, resilient revenues that are de-risked via geographic and drug class diversification

Product	LTM global net sales	5-year consensus projected sales ¹	Royalty rate	5-year projected royalty to Innoviva ¹
 RELVAR® / BREO® ELLIPTA® First once-daily inhaled corticosteroid / long-acting beta-agonist for asthma and chronic obstructive pulmonary disease	\$1.4B	\$6.3B	15%²	~\$940M
 ANORO® ELLIPTA® Best-in-class long-acting beta-agonist /long-acting muscarinic antagonist for COPD	\$0.7B	\$3.4B	6.5%³	~\$220M
			Total	~\$1.2B

1. According to analyst consensus projections on GSK forecast website accessed July 30, 2024; analyst forecasts updated on June 7, 2024; GBP converted to USD using June 7 exchange rate of \$1.27

2. 15% on first \$3B in annual sales; 5% on sales over \$3B

3. Tiered 6.5-10.0%

Relvar/Breo and Anoro are protected by an IP estate with meaningful remaining exclusivity

	Primary US patent	Potential expiration	Key secondary US patent	Potential expiration
RELVAR®/BREO®ELLIPTA®	Vilanterol drug substance ¹	2025	ELLIPTA device ³	2031
<hr/>				
ANORO®ELLIPTA®	Umeclidinium drug substance	2027	Process for aggregating particles of umeclidinium and/or vilanterol and/or fluticasone furoate ⁴	2033

Manufacturing complexity provides further protection

The terms of the collaboration agreement with GSK indicate that royalties will be paid until the later of:

- The expiration of the last patent covering the pooled compound in each collaboration product
- 15 years from first commercial sale of each product in such country

For each of the portfolio products, the secondary patent expiration date would be the later date for purposes of royalties.

IP protection in international markets is generally longer dated than in the US.

1. US patent 7,439,393. Original expiration 9/11/2022, granted additional exclusivity to 2025 through 35 USC §156
 2. US patent 7,488,827
 3. US patent 8,746,242. Original expiration 10/11/2030, granted additional exclusivity to 2031 through pediatric sNDA exclusivity
 4. US patent 9,763,965

Innoviva Specialty Therapeutics (“IST”) highlights

IST is a robust, rapidly growing critical care and infectious disease business uniquely positioned to unlock value

Differentiated, complementary portfolio

- Synergistic “infectious disease plus” portfolio with 3 approved products and 1 Pre-NDA program

Efficient, fully-integrated platform

- Commercial platform anchored by an experienced field force and supported by strong medical, regulatory, and CMC teams with proven track record

Attractive, high-growth financial profile

- Strong topline growth driven by two re-energized products and recent XACDURO launch with significant operating leverage (LTM revenue of \$89M¹)

Durable business with strong IP protection

- Multiple patents with significant remaining exclusivity and options for further extension

Significant expansion potential and upside

- Leading critical care and infectious disease franchise with a robust, scalable foundation for future strategic opportunities, and further potential upside from public incentive programs

1. Net sales and license revenue for the last twelve months ending June 30, 2024

IST has a diversified portfolio of high growth hospital and critical care products addressing sizeable markets with significant unmet needs

	Product	Indication	LTM net sales and license revenue	Selected future growth drivers
Marketed products	 GIAPREZA™ (angiotensin II)	Vasoconstrictor to increase blood pressure in adults with septic or other distributive shock	\$46M	<ul style="list-style-type: none"> • Potential guidelines update and inclusion of GIAPREZA • Additional data generation and real-world evidence, including investigator-initiated studies
	 XERAVA™ (eravacycline) for injection	Antibacterial for the treatment of complicated intra-abdominal infections	\$21M	<ul style="list-style-type: none"> • Rising rates of ESBL resistance² • Growing urgency of the need for carbapenem-sparing agents
	 XACDURO™ (sulbactam for injection; durlobactam for injection),	Antibacterial for the treatment of HABP/VABP caused by <i>Acinetobacter baumannii</i>	\$21M¹ (Sept 2023 launch)	<ul style="list-style-type: none"> • Only therapy indicated specifically for <i>Acinetobacter</i> infections • Rising rates of resistance globally
Development pipeline	Zoliflodacin	Oral antibacterial in development for treatment of uncomplicated gonorrhea , including resistant strains	N/A (NDA submission planned early 2025)	<ul style="list-style-type: none"> • Rising rates of resistance to only remaining standard of care, ceftriaxone • Convenience of oral (vs. in-person intramuscular injection)

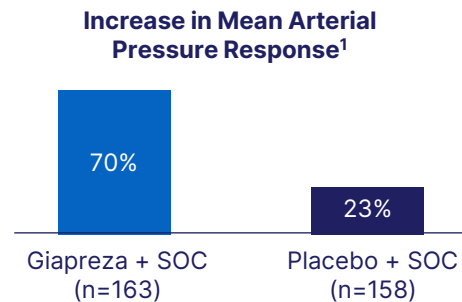

1. Includes \$14.5M in license revenue
 2. Antimicrobial Resistance Infection Control 10: 118 (2021)

GIAPREZA: Rapid-acting vasoconstrictor for shock patients

Indications and usage

- GIAPREZA was approved in Dec 2017 to increase blood pressure in adults with **septic or other distributive shock, an indication with persistently high mortality rates**
- GIAPREZA mimics the body's **endogenous angiotensin II peptide** which is central to the RAAS system that naturally regulates blood pressure

In a pivotal trial, GIAPREZA demonstrated statistically significant ($p < 0.0001$) improvement in mean arterial pressure in patients **already receiving standard of care**

Unmet need

- **Approximately 140K shock patients each year** fail 1st and 2nd line vasopressor therapies², usually resulting in death; these patients need a new rapid-acting option with a unique mechanism of action
- Other patient types (e.g., cardiac patients) need shock treatments that do not act directly on the heart due to safety concerns

Key differentiators

- ★ **Unique mechanism of action**
 - GIAPREZA regulates blood pressure through the body's own renin-angiotensin-aldosterone system (RAAS); it is the only RAAS regulator available for patients
- ★ **Potential survival benefit when initiated with lower vasopressor doses**
 - In an exploratory post hoc analysis of ATHOS-3, early use of GIAPREZA plus standard of care was associated with improved survival vs. placebo plus standard of care³
- ★ **Rapidly achieves therapeutic response**
 - Median response time of only 5 minutes, allowing for real-time monitoring and therapeutic adjustment⁴
- ★ **Flexible dosing for rapid adjustment and diverse patient types**
 - Short plasma half-life (<1m) allows for easy titration and near real-time adjustment of the therapeutic response
- ★ **Addresses highest cost hospital-treated condition**
 - Sepsis is the most expensive hospital condition in the U.S.⁵; reducing mechanical ventilation or avoiding renal replacement therapy may save \$15,000-\$36,000 in total hospital charges⁶

Note: RAAS = renin-angiotensin-aldosterone system; SOC = standard of care vasopressors

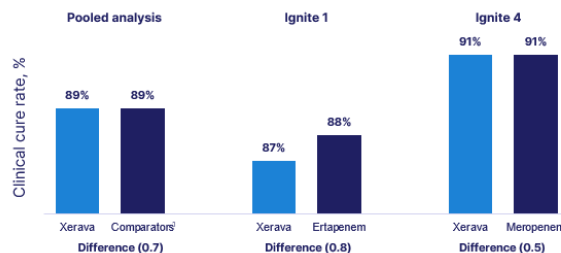

1. MAP of 75 mm Hg or higher or an increase in MAP from baseline of at least 10 mm Hg at Hour 3 without an increase in the dose of background vasopressors
2. Estimate based on CDC, Rhee et al, Mahapatra et al, Kumar et al, Angus et al, Rudd et al, with LoT split derived from Trinity PMR data
3. Wieruszewski PM, Bellomo R, Busse LW, et al. Initiating angiotensin II at lower vasopressor doses in vasodilatory shock: an exploratory post-hoc analysis of the ATHOS-3 clinical trial. Crit Care. 2023;27(1):175
4. Wieruszewski PM, Bellomo R, Busse LW, et al. Crit Care. 2023;27(1):175
5. Paoli CJ, Reynolds MA, Sinha M, et al. Crit Care Med. 2018;46(12):1889-1897
6. Self WH, Liu D, Strayer N, et al. Chest. 2019;155(2):315-321

XERAVA: Broad-spectrum antibiotic with unique strengths to address rising ESBL strains and carbapenem resistance

Indications and usage

- XERAVA is a tetracycline-class antibiotic approved in August 2018 for the treatment of **complicated intra-abdominal infections (cIAI)** caused by susceptible microorganisms
- Potential and recommended uses as a:
 - Empiric therapy for patients with cIAI
 - Consolidation therapy
 - Tetracycline of choice (therapeutic substitution)

Clinical trials demonstrated non-inferiority to most common carbapenems at test of cure visits

Unmet need

- **Rising ESBL rates worldwide**
 - Dramatic increase in ESBL-producing bacteria worldwide; rates of ESBL bacteria in U.S. hospitals as high as >30% for some common cIAI pathogens¹
- **Overreliance on carbapenems**
 - Growing carbapenem resistance across multiple pathogens requires carbapenem-sparing treatment options for empiric therapy
- **CDI infections a persistent concern for hospital systems**
 - Clostridium difficile continues to be a serious problem in many hospital systems, affecting approximately 500,000 patients per year in the U.S.²

1. Antimicrobial Resistance Infection Control 10: 118 (2021)
 2. BMC Infectious Diseases 23, 132 (2023)
 3. Drugs 76(5):567-588 (2016)
 4. Centers for Disease Control and Prevention. Core elements of hospital antibiotic stewardship programs. Accessed November 28, 2023

Key differentiators

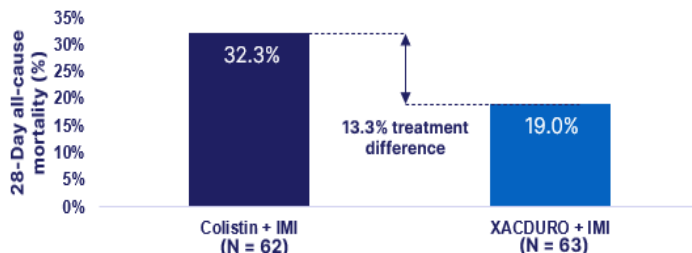

- ★ **Carbapenem-sparing empiric therapy**
 - Broad-spectrum therapy with proven efficacy when compared head-to-head with carbapenems allows for empiric choice that reduces overreliance on these therapies, an important priority for preventing resistance development
- ★ **More tolerable and potent substitution for previous tetracyclines**
 - The most popular third generation tetracycline, tigecycline, has significant utilization despite clear tolerability disadvantages compared to XERAVA
 - XERAVA is 2 to 4 times more potent than tigecycline in vitro against gram-positive and gram-negative bacteria³
- ★ **Preferred option against specific resistant pathogens**
 - cIAI is caused by a wide variety of pathogens; XERAVA is an attractive option for certain resistance profiles, including growing ESBL-driven infections
- ★ **Supports antibiotic stewardship, including *C. difficile* mitigation**
 - Recommended XERAVA use follows the key tenets of antibiotic stewardship which, among other benefits, helps reduce *C. difficile* infections⁴
- ★ **Simple administration as monotherapy with convenient dosing**
 - Can be administered to patients with penicillin allergy and no dosage adjustment necessary in patients with renal impairment

XACDURO: First pathogen-targeted therapy approved for life threatening *Acinetobacter* infections

Indications and usage

- XACDURO is the **first pathogen-targeted therapy approved** for the treatment of hospital-acquired and ventilator-associated bacterial pneumonia caused by susceptible strains of *Acinetobacter baumannii-calcoaceticus* complex

XACDURO demonstrated statistical non-inferiority to colistin on 28-day all-cause mortality in patients with carbapenem-resistant *Acinetobacter* infections

Unmet need

- Drug resistant *Acinetobacter* has been identified by the CDC and WHO as an **urgent global public health threat with over 300K annual deaths¹** associated with carbapenem-resistant infections worldwide
- Carbapenem-resistant *Acinetobacter* (CRAB) infections have a **~40% mortality rate** in the United States despite best current antibiotic treatment

Key differentiators

- ★ **Only therapy specifically approved for *Acinetobacter* infections**
 - With no existing antibiotics proven effective for carbapenem-resistant cases, XACDURO is a clear standout as first choice for these infections
- ★ **Specific pathogen-targeted drug design**
 - End-to-end R&D focus on resistant *Acinetobacter* cases provides a unique advantage with clear and easy messaging to HCPs and hospital systems
- ★ **Statistically significant difference in nephrotoxicity vs. colistin**
 - Pivotal trial demonstrated overall positive benefit / risk profile compared to colistin, with lower incidence in nephrotoxicity – a serious complication, particularly for ICU patients
- ★ **Positioned to avoid common stewardship and access concerns**
 - Other branded antibiotics push for broad empiric use but are held back by stewardship and budget concerns; XACDURO is positioned to be used for specific infections only, allowing it to be used in these settings without raising the same stewardship or budget concerns
- ★ **New-Technology Add-On Payment (NTAP)**
 - Starting October 1, 2023, NTAP provides hospitals an incremental payment in addition to the standard MS-DRG reimbursement up to \$13,680 for patients treated with XACDURO per qualifying case

Note: SOC = Standard of Care

1. Antimicrobial Resistance Collaborators Lancet 2022; 399: 629–55
 2. Kaye et al. Lancet Infect Dis. 2023 May 11:S1473-3099(23)00184-6

Zoliflodacin: Potential to be the only effective treatment for ceftriaxone-resistant gonorrhea, pending approval

About zoliflodacin

Zoliflodacin is a novel orally administered antibiotic in development for the treatment of uncomplicated gonorrhea.

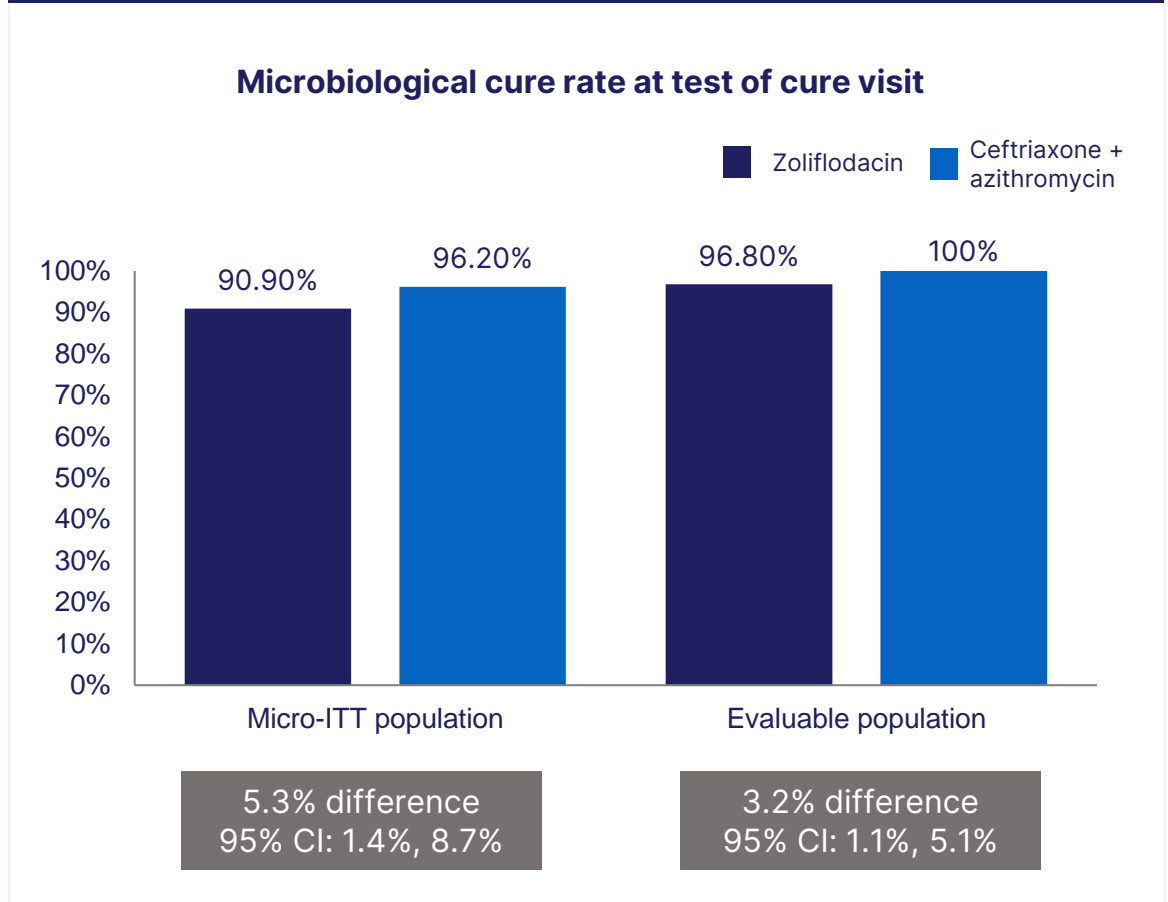

Gonorrhea is one of the **most commonly diagnosed sexually transmitted infections**, with more than 80 million cases a year around the world and over 1 million a year in the U.S.

We believe there is a growing unmet need for a **single-dose oral** antibiotic that will reliably treat patient with gonorrhea, including multidrug-resistant strains which are emerging globally

In a pivotal Phase 3 trial, zoliflodacin **met the primary efficacy endpoint** and was non-inferior to treatment with intramuscular (IM) injection of ceftriaxone and oral azithromycin (CRO-AZI), a current global standard of care regimen

In this study, zoliflodacin was **safe and generally well-tolerated**; majority of adverse events were mild to moderate with no discontinuations due to adverse events, serious adverse events, or deaths

Results from pivotal Phase 3 trial

Zoliflodacin, if approved, could address both near-term and long-term unmet needs as a single dose oral therapy

Gonorrhea market dynamics

- Gonorrhea is a large and growing market with ~1M treated patients per year in the U.S. (700-800K reported and 1.6m estimated by U.S. CDC)¹
- Current U.S. standard of care is a 500mg intramuscular injection of ceftriaxone administered in a clinic or physician office
- If approved, we see **unmet need and commercial opportunity for zoliflodacin in two primary areas**

Reported U.S. gonorrhea cases by year (K)¹

1. Potential market opportunities for oral therapies

Telehealth

An increasing number of STI patients initially present through remote consultation; an efficacious oral option could be preferred to minimize required site visits, especially if paired with local or at-home diagnostics

EPT

Some prescribers offer patients oral therapies to deliver to partners after being diagnosed with STIs, including gonorrhea

Oral preference

If covered, some patients with private insurance would opt for a copay and an oral therapy vs. a painful injection, especially if the dose continues to rise

Unique patient populations

Other populations where stockable oral therapies would be preferred due to uneven access to healthcare infrastructure (e.g., military, government contracts, international travelers, global health settings)

2. Growing unmet need for ceftriaxone-resistant strains

Rapidly increasing international ceftriaxone-resistance; over 30% of isolates in some southeast Asian regions¹

First confirmed gonorrhea cases with reduced susceptibility to ceftriaxone in the U.S. in 2023

U.S. resistance patterns could follow global trends and create a need for new efficacious therapies and resulting shifts in guidelines

1. U.S. Centers for Disease Control, STD Surveillance 2021
 2. The Lancet 2021. Vol 2 issue 11, E627-636

Our robust portfolio of strategic healthcare assets in areas of high unmet medical need with significant long term value creation potential

Value as of 6/30/2024¹

Innovative anti-infectives R&D

- **Armata has R&D and manufacturing capabilities** along with a platform in bacteriophages, a new therapeutic modality

\$204M

Minority investments in high growth areas

- Strategic equity and convertible debt investments in **high-potential healthcare companies** with significant promise

\$62M

ISP Fund providing further exposure to healthcare

- \$300M initially committed to ISP Fund in Dec 2020 primarily to public equity investments in healthcare in areas of significant value dislocation, providing long-term upside

\$270M

1. Innoviva Form 10-Q

We have actively deployed capital to maximize shareholder value

Return of capital to shareholders

Repurchased GSK's 32% equity stake for \$392M and completed \$100M share repurchase program

Opportunistic asset monetization

Monetized Innoviva's share of TRELEGY® royalties for \$282M upfront, additional asset rights, plus \$50M milestone

Value-accretive company acquisitions

Acquired Entasis and La Jolla to form an integrated commercial-stage critical care and ID business

Thoughtful asset acquisitions

Deployed over \$550M¹ of capital into differentiated assets across a diverse healthcare portfolio

Capital structure optimization

Issued \$261M 2028 notes on advantageous terms and fully redeemed \$241M 2023 notes

We thoughtfully approach capital deployment with a strong value focus

1. As of 6/30/2024; includes \$300M placed with ISP fund, over \$180M deployed into Armata, and approx. \$75M deployed into investments into InCarda, ImaginAb, Nanolive, and Gate Neurosciences

Top line summary: positive zoliflodacin Phase 3 results

- An estimated 82 million patients contract gonorrhea each year¹, with rising rates of resistance to standard of care regimens in many countries².
- We, in collaboration with GARDP, conducted a global pivotal phase 3 trial to evaluate the efficacy of a single 3g oral dose of zoliflodacin in treatment of uncomplicated gonorrhea, comparing to treatment with a combination of intramuscular injection of ceftriaxone and oral azithromycin.
- Zoliflodacin met the primary efficacy endpoint and was non-inferior to the comparator arm in participants with urogenital disease (point estimate 5.3% (95% confidence interval: 1.4%, 8.7%)).
- For the key secondary analyses of infections at rectal and pharyngeal sites, the rates of cure in the zoliflodacin arm were comparable to those observed in the comparator arm, although these analyses were not powered for statistical significance.
- In this study, zoliflodacin was found to be safe and generally well-tolerated; majority of adverse events were mild to moderate with no discontinuations due to adverse events, serious adverse events, or deaths.
- The study outcome could offer an important therapeutic option for patients and represents a positive milestone in the development of zoliflodacin and the fight against antimicrobial resistance.

Armata is an innovator in anti-infectives addressing significant unmet medical need

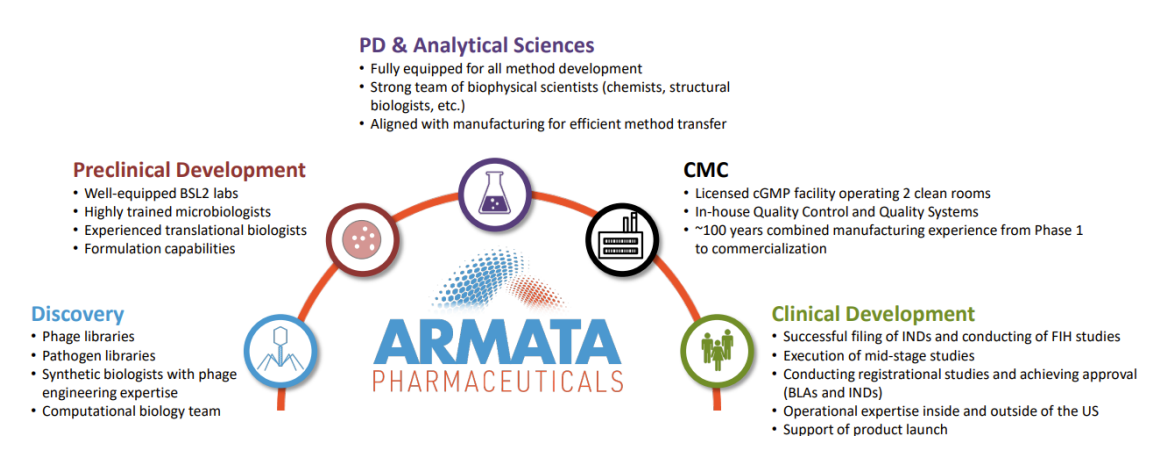

Armata is a clinical-stage biotechnology company focused on the development of precisely targeted bacteriophage therapeutics for the treatment of antibiotic-resistant and difficult-to-treat bacterial infections

Diverse bacteriophage pipeline with multiple “shots on goal”

US Department of Defense (Naval Medical Research Center, US Army Medical Research Acquisition Activity, Defense Health Agency)
CF: cystic fibrosis; NCFB: non-CF bronchiectasis; PJI: prosthetic joint infection

Broad, robust capabilities

Additional minority portfolio investments

ImaginAb is a leader in radio-pharmaceutical imaging with a differentiated solution for IO patient care and other areas of unmet medical need

Gate Neurosciences is developing next-generation therapies for psychiatric and neurological disorders

Program	Mechanism	Disease Area	Preclinical	Ph1	Ph2a	Ph2	Ph3
Zelquistinel	NMDAR Modulator	Major Depressive Disorder (MDD) + other psychiatric disorders	█	█	○	○	
Apmostinel	NMDAR Modulator	Acute Severe MDD + other acute depression subsets	█	█	○		
GATE-252	NMDAR Modulator	Neurocognitive Disorders	█				
GATE-102	mGluR2/3 Antagonist	Central Sleep Disorders	█				
GATE-301	iGFBP2 Mimetic	Neurocognitive Disorders	█				

*Next Phase 2 study to be initiated in 2022.

Nanolive is a microscopy company that has developed a method for live cell 3D imaging and analysis with applications across drug discovery and biotech R&D

InCarda focuses on cardiovascular diseases; its lead drug is in late-stage development for PAF

Product Candidate	Preclinical	Phase 1	Phase 2	Phase 3	Regulatory Approval
InRhythm™ Under Medical Supervision: INSTANT Phase 2	█	█	█		
InRhythm™ For Patient Self-Administration (At-Home, Out of Hospital)	█	█	█		
Persistent AF Programs	█	█			
Additional Cardiology Programs	█
